## Federal Election

# OUR POLICIES

### Ban Live Export

Each year, millions of animals suffer on lengthy sea journeys. We won't stop until we achieve a ban on all live animal exports, forever.

### Combat the Climate Emergency

We will legislate to protect native habitats from further destruction, investing in clean energy and transitioning animal agriculture to plant-based agriculture.

### End Factory Farming

We will fight for a rapid phase out of battery hen cages and sow stalls.

### Safeguard our National Emblem

Kangaroos should be protected and not seen as resources or pests. We will urgently change legislation to protect kangaroos from commercial killing.

### Protect Wildlife Habitats

Land clearing is an animal welfare disaster, displacing and killing huge numbers of wildlife. We will introduce laws to protect wildlife habitats.

### Establish a Federal Animal Rights Commission

Animals have unique rights which should be protected by law. We will establish a legal system for animals which protects their right to live free from human harm.

## MAKE YOUR VOTE COUNT!

With preferential voting, a **1** vote for the Animal Justice Party is a powerful message that you care about animals and the environment. If we don't win, your vote goes to your 2nd preference at full value.

## ABOUT THE ANIMAL JUSTICE PARTY

In 2009 a group of animal advocates and carers came together to form a party to give a voice to animal concerns in parliament. We are now one of the fastest growing political parties in Australia. With three elected representatives - one in Victoria and two in NSW - the major parties can no longer ignore us. Our vote is growing and our collective voice is getting stronger – and we are saying loud and clear that animals' lives matter.

The AJP wants to stop the terrible things that are happening to animals right now - the vile live export trade, lawful but cruel treatment of animals in agriculture, especially in factory farms, shadeless paddocks, the loss of habitat from land clearing and native forest logging and the mindless killing of our native animals.

We recognise that the exploitation of animals cannot be separated from concerns about the health of our natural world and the impact that environmental damage also has on human beings. Every time we see a dust storm blow over the land, see dying trees or scorched landscapes, we know that urgent environmental action is critical for our survival.

## Our vision and plan for a kinder world for all - animals, the environment and people.

Upon election to the senate, our very first act will be to introduce legislation for a ban on live export. Climate change is a problem of massive scale that is already affecting people and animals. We will take immediate action to reduce emissions by rapidly phasing out fossil fuels, transitioning to clean energy, reducing deforestation and transitioning to sustainable plant-based agriculture.

The Animal Justice Party is part of a growing global political movement that believes that the best way to make positive change for animals and the environment is through the political system.

Every time we see a dust storm blow over the land, see dying trees or scorched landscapes, we know that urgent environmental action is critical for our survival.

## Our vision and plan for a kinder world for all - animals, the environment and people.

Upon election to the senate, our very first act will be to introduce legislation for a ban on live export. Climate change is a problem of massive scale that is already affecting people and animals. We will take immediate action to reduce emissions by rapidly phasing out fossil fuels, transitioning to clean energy, reducing deforestation and transitioning to sustainable plant-based agriculture.

The Animal Justice Party is part of a growing global political movement that believes that the best way to make positive change for animals and the environment is through the political system.

# OUR POLICIES

### Ban Live Export

Each year, millions of animals suffer on lengthy sea journeys. We won't stop until we achieve a ban on all live animal exports, forever.

### Combat the Climate Emergency

We will legislate to protect native habitats from further destruction, investing in clean energy and transitioning animal agriculture to plant-based agriculture.

### End Factory Farming

We will fight for a rapid phase out of battery hen cages and sow stalls.

### Safeguard our National Emblem

Kangaroos should be protected and not seen as resources or pests. We will urgently change legislation to protect kangaroos from commercial killing.

### Protect Wildlife Habitats

Land clearing is an animal welfare disaster, displacing and killing huge numbers of wildlife. We will introduce laws to protect wildlife habitats.

### Establish a Federal Animal Rights Commission

Animals have unique rights which should be protected by law. We will establish a legal system for animals which protects their right to live free from human harm.

## MAKE YOUR VOTE COUNT!

With preferential voting, a **1** vote for the Animal Justice Party is a powerful message that you care about animals and the environment. If we don't win, your vote goes to your 2nd preference at full value.

## ABOUT THE ANIMAL JUSTICE PARTY

In 2009 a group of animal advocates and carers came together to form a party to give a voice to animal concerns in parliament. We are now one of the fastest growing political parties in Australia. With three elected representatives - one in Victoria and two in NSW - the major parties can no longer ignore us. Our vote is growing and our collective voice is getting stronger – and we are saying loud and clear that animals' lives matter.

The AJP wants to stop the terrible things that are happening to animals right now- the vile live export trade, lawful but cruel treatment of animals in agriculture, especially in factory farms, shadeless paddocks, the loss of habitat from land clearing and native forest logging and the mindless killing of our native animals.

We recognise that the exploitation of animals cannot be separated from concerns about the health of our natural world and the impact that environmental damage also has on human beings. Every time we see a dust storm blow over the land, see dying trees or scorched landscapes, we know that urgent environmental action is critical for our survival.
